

WINTER COMPOUNDS

We launched our new winter compound range at the start of October, and speaking to our customers, these are all performing well on farm. The range includes 2 NEW products both including maize as the main ingredient optimising energy provision to the cow.

Our Birkhill mill in Lanarkshire - efficient, sustainable dairy compound production in south Scotland.

All products in our range are:

- Made from quality, sustainable raw materials
- Soya and palm kernel free
- Fixed price - October - March

UltraMilk 16 Nuts

NEW!

A new compound that would suit robotic systems or those feeding compound to yield through the parlour.

Specifically tailored to feeding high levels	High quality starch and protein sources to promote milk production. Including protected rape which provides high levels of methionine (often limited in dairy diets). 16% protein to ensure protein is not oversupplied.
Maize as top ingredient	Rumen friendly starch source to provide energy to the cow
Evo	Reduces stress and allows cow to eat, lie down and ruminate for longer periods promoting milk production

SupaMilk 18 Nuts

Appropriate for parlour feeding.

Rumen degradable starch and protein	Well balanced to promote rumen function
Good quality starch and fibre sources	Supporting a healthy rumen environment
Complements a range of diets	Using our new rumen friendly rationing software, SupaMilk is a complementary, cost effective compound for a range of diets

MaizeMilk 18 Nuts

NEW!

High energy cake with a range of starch sources to promote milk production. Would suit all systems.

Maize as top ingredient	Rumen friendly starch source to provide energy to the cow
18% protein	High quality protein sources including protected rape which provides high levels of methionine (often limited in dairy diets)
Evo	Reduces stress and allows cow to eat and ruminate for longer periods, improving milk production

Enhancer 18 Nuts

Competitively priced for those using a compound in the parlour.

Balanced rumen degradable starch and protein. Mineralised to promote health and production.

ev^o for dairy cows

A trial was conducted feeding Evo to a robotic herd and compared to the same period the year before. This demonstrated the effect that Evo can have on improving milk production through less stress.

WINTER BLENDS

Our high performance winter blends are fixed price from October - March, enabling you to plan ahead.

Harbro
QUALITY LIVESTOCK NUTRITION

We have a wide range of dairy blends with options to suit every feeding system.

Our blends are:

- Made from quality, sustainable raw materials
- Palm kernel free

Complete diet blends - made with our Maxammon cereals.

For farms buying in cereals and proteins in a blend, our Maxammon blend range delivers the following results:

- improves the metabolisable protein, pH and digestibility of the diet
- resulting in improved milk yield, solids, and improved health and fertility.

Ultimate 35 - lower price/litre than competitor's equivalent product

Ultimate 35 is our high protein blend full of good quality proteins. It is a great option to complement your ration if you have home grown cereals or buy these in straight.

On farm results comparing performance of Ultimate 35 against a competitor blend, with similar crude protein %, containing urea, showed the following:

Additional profit

52 p/cow/day or

£104/day for
average 200 cow herd.

WARNING!

Don't be influenced by price/tonne, it's important to look at price/litre, cheaper blends often have lower performance and therefore a higher price/litre and less profit!!!

Bespoke blends and soya free/sustainable soya options

We can supply bespoke dairy blends to meet the exact requirements of your herd and to fulfil your contract requirements. These can be made soya free, or include sustainable soya.
