ISSUES

When to feed?

Feed Spring to Autumn when grass is plentiful, however it is still important to provide essential vitamins and minerals to ensure nutrient requirements are met. Feed for 6 weeks pre-tupping and throughout tupping to both ewes and tups to ensure your flock gain maximum benefit.

Energyze Forage Booster

Molassed feed bucket that provides instant energy and essential nutrients to support rumen function, forage digestion and utilisation to ensure your flock retains the required body condition.

BENEFITS

- ✓ Boosts growth, health and immunity and supports foetus development
- ✓ Encourages rumen function to enhance energy availability when forage quality is poor
- ✓ Supports liver to reduce risk of twin lamb disease
- ✓ Enhances appetite
- ✓ Reduces cases of ill-thrift and CCN

When to feed?

Feed Autumn to Winter to support forage intake and provide extra feed energy when forage quality may be poorer or less available.

Energyze Vitality

Molassed feed bucket designed to support the ewe in late pregnancy and give lambs the best start in life.

BENEFITS

- ✓ Enhances lamb vigour and ensures they stand and suckle quickly
- ✓ Boosts colostrum quality
- ✓ Supports ewe and lamb health and immunity
- ✓ Supports liver to reduce risk of twin lamb disease
- ✓ Helps repair cell and tissue damage
- ✓ Reduces cases of ill-thrift and CCN to support rapid lamb growth

QUALITY.
HELPS PRODUCE
STRONG,
HEALTHY LAMBS

When to feed?

Feed late Winter to Spring. Introduce 6-8 weeks pre-lambing and continue once lambing is complete until grass is more plentiful and additional feed energy is no longer required.
