

Take advantage of market prices and finish lambs early

Young lambs have an inbuilt growth efficiency, as they are able to convert at 4:1, which means they only need 4kg of feed to put on 1kg weight. Post weaning, this will be 5:1.

Creep feeding is a great way to kick start rumen development which is essential for lifelong efficiency and performance. Creep feeding also takes pressure off ewes, allowing them to regain condition ready for tuppung season again.

Our range of creep feeds include RumiTech, Alkacid and a quality mineral package. **RumiTech reduces feed intake by 10% at the same time as promoting lamb growth and Alkacid provides round the clock protection against acidosis.**

CUSTOMER SUCCESS:

“ We have been using Harbro creep feed since 2007 and find it does a great job, we would be very reluctant to feed anything else”

Andrew McLean, Kings Arms Farm, Ballantrae
